

MRT3 ROBOT TIME

MRT3 Series

- MRT3 curriculum is developing for helping students(age 6 - 13+), through robotics, learn essential STEM (science, technology, engineering, and math) concepts.
- Step by step and systematic building instructions for MRT3 educational robot kits.

Part list

Block

※ The form and color of some parts may be different when compared to actual parts due to continues improvement of production quality.

Frame / Adapter

Shaft / Bush

Gear / Wheel

Electronic Parts

Let's learn how to assemble each part and its function!

Special point of blocks

※ As shown above different blocks structure has different numbers of studs. Be careful the direction when assemble.

Assemble blocks

The blocks can be assembled in any structure.
(The middle hole can be used to assemble the DC motor)

※ Block15 means that it has 5 holes in a row and the left column side has 3 studs, the other side has 2 studs.

※ Block35 means that it has 5 holes in three rows(total 15holes), also the block 35 has one side with 3 studs miss some words here.

※ Block 511 means that it has 11 holes in five rows(total 55 holes), one side has 6 studs, the other side has miss some words here.

※ Block 90 means the block is in "L" shape with the angle of 90 degree.

※ Block 135 means has an angle of 135 degrees.

Assemble using an adapter

※ Some steps to take note when using the adapter.

If both sides are odd or even, the block can't assemble with adapter.

Make sure that both upper and lower of the block must have the equal studs, when assemble using adapter.

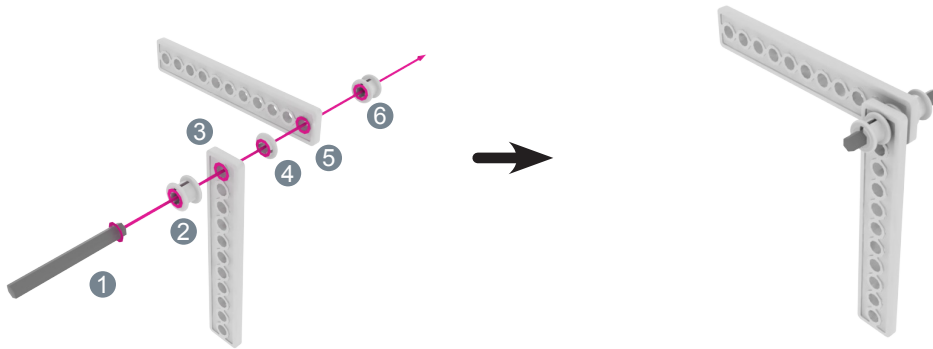

Assemble block and frame .

※ When assemble block and frame, make sure all the block's studs inserted into the frame's hole.

Assemble shaft and bush

※ Try to assemble in order.

Assemble DC motor and coupling.

※ The coupling is used to join the shaft to the motor and can be used to make the shaft longer.

Assemble DC motor and wheel.

※ Try to assemble in order.

L Adapter

※ please assemble* (Arrow) direction first.

Shaft

Frame 11

S--shaft (5 holes distance)

M--shaft (7 holes distance)

L--shaft (11 holes distance)

What robots are we going to assemble?

1. Piglet

2. Multiple Gadget's Arm

3. F—15 Fighter

4. Three Wheels Bicycle

5. Apache Helicopter

6. I am a Gymnast!

7. Mini Racing Car

8. Avatar Helicopter

9. Knight and Donkey

10. X—SOCCER

11. Drummer baby bear

12. Air sing sing Plane

13. Bumper car

14. Boxing Robot

STEM 4. The use of weight and pulleys

What are the uses of weights and pulleys?

A pulley is made by wheel, shaft and rope.
There are two kinds of pulleys,
do you want to try to lift objects using both?!

Fixed pulley

Moving pulley

Wheel
Shaft
Rope

The object isn't that light but the fixed pulley makes it easier to move.

Wow! This object is really easy, but why does the object move so little?

Why?!

What is the difference between fixed and moving pulleys?

12

End

How to operate the Gymnast

Connecting the main board

Connecting in this order.

1. Connect battery case to Power connector.
2. Connect DC motor to the Right-motor connector.

Setting mode

1. Ensure battery case/DC Motor Connector are connected.
2. Turn on the power.
3. Press the mode button and select as the follow mode.

4. Press the START button.

How to make it move?

※ Press START button, the small robot will swing like a Gymnast.

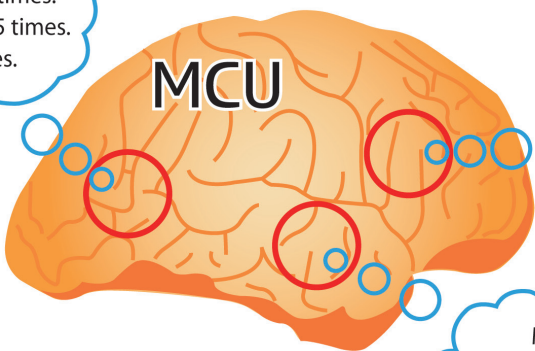

Technology

STEM 6. Brain of the robot-MCU

The MCU (Micro Controller Unit) is what makes the robot move. The MCU saves and runs programs to make the robot move in the desired way.

Mode #1:
Both wheels move forward 5 times.
Both wheels move backwards 5 times.
Right wheel moves 5 times.

Mode #2:
Right wheel moves independently.

Mode #3:
Left wheel moves independently

Make your own robot using a mainboard.

Spiral notebook page with horizontal lines for writing.

T Technology **STEM 7. Control of the robot -Remote Control**

Can you change the channel?

Do it yourself!

You're closer than me.

1

Here's a remote controller.

Whizz~

Thank you Huna. What's the principle of a remote control?

2

Let's take a look.

How can I change the channel from far away?

3

If you press the button, that information is sent to the TV via the IR sensor and the TV receives that information.

Ah

4

Ok, then...

The IR Sensor changes the electric signal and the TV can recognize the change.

Then why radio and airconditioners can't be controlled by a TV Remote controller?

5

6

Each product and company have different IR signals and sensors. Thesedays you can find universal remote controls.

7

Thanks!What's your serial number?

Why?

8

I want to control you.. hahah!

9

Technology Engineering **How to use the remote control?**

Remote Control configuration

Setting remote control ID

- ① Turn on the robot.
 - ② Select # 2 mode of robot. 
 - ③ Press CH button while holding ← button. The A panel ID LED turns on and shows you what mode you chose.
 - ④ Press CH button while holding ← button and choose your ID. (Number 1~8)
 - ⑤ After selecting ID, if you release ← Button and press CH button, ID will be selected.
 - ⑥ The LED on the mainboard will blink 3 times and it will turn off automatically.
That means the ID Selection is finished.
 - ⑦ If you press ← button, you can see your selected ID.
- ※ If there is a problem, repeat steps 1-7 carefully.

How to set up communication ID

- ※ The maximum number of channels can be set as shown below without interference.
Use the picture to assign the channels to the communication ID.

S T Science **Technology** **STEM 8. The principle of a remote control**

Using a remote control, what can you order a robot to do?

A spiral-bound notebook with three horizontal lines for writing.

T Technology
E Engineering **STEM 9. Robot Development**

The first generation of robots helped humans with simple tasks, like factory work.

- Simple repeat robot
- Industrial robot

1st Generation robots were used for simple repeated tasks.

The second generation of robots had senses much like humans did. Sensors were added to help with the process.

These robots are more friendly with humans and fun to be around.

- Pleasure robot
- Pet, Game, soccer robot

3

3rd generation robots will be the future. They will have human qualities and shapes and mimick actions of real humans. They'll have AI (Artificial Intelligence) to be able to interact with humans.

- Artificial Intelligence robot / Humanoid robot
- Personal Agent
- Educational robot

How to make it move?

※ Use paper cup to make a drum for baby bear.

Technology

STEM 10. History of Robot

Let's look around history of robots.

	Past	Recent Past	Present	Future
Culture	-They talked about it in literature. The oldest robot is a Giant Bronze Talus in Greek Mythology.	-In 1949, the author Jack Williams wrote in his book, "Humanoid" about the creation of a robot-human character.	-In 2003, WowWee Company made a humanoid robot toy. 1 year later ZMP made "Nuvo", a remote controlled robot.	
Technology	-In 18th century France, Jacquess de Vaucanson made an artificial duck capable of flapping its wings, quacking, eating and digesting food.	-In 1927, American, R.J Wensley made 'Telebox', and in England, Richard made Eric the robot.	-NASA made a remote controlled robot Robonaut and Anthony Gallo Company developed Mars Probe, which was a flying robot.	-MicroRobot, Service Robot, Farming Industry Robot, Space Robot, and Automatic (non-manned) Transportation and Entertainment robot will be forecsted for practical usage.

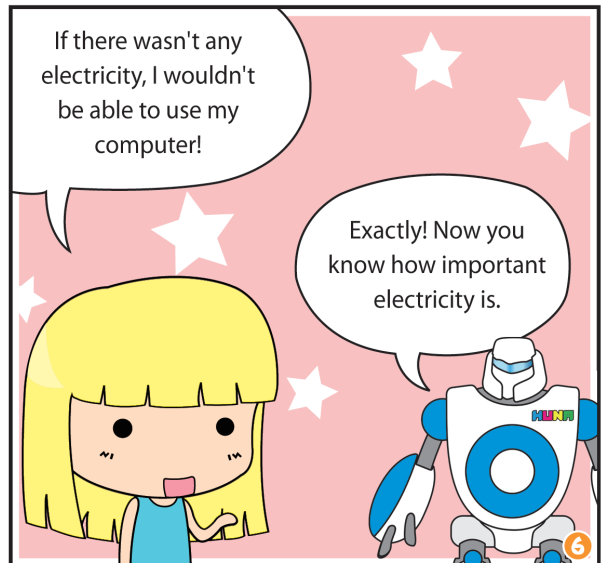

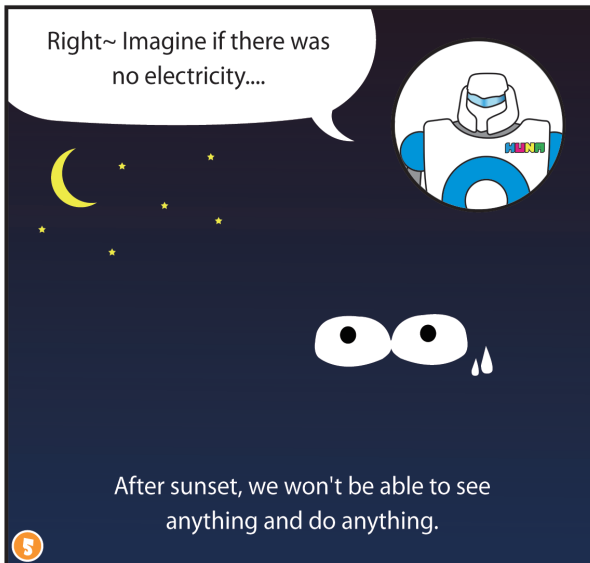

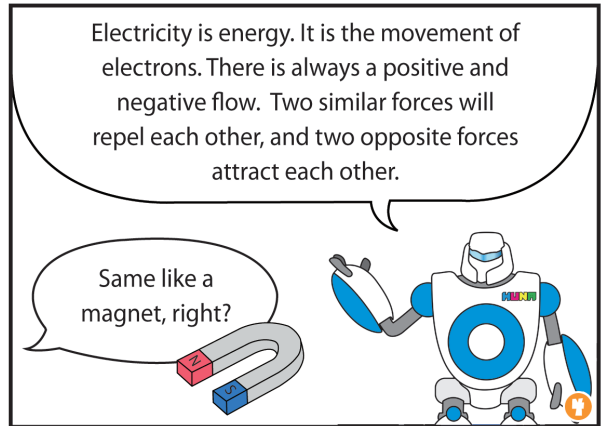

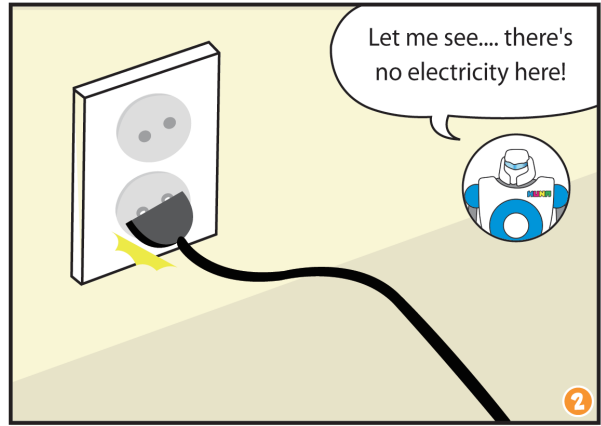

**In the future, what robot will be produced?
Imagine your own robot and try to make it.**
